## WARDROBE DOORS »

G. James provides the perfect blend of affordable elegance, strength and practical space-saving ideas with a range of functional sliding wardrobe door products. The bi-passing characteristic of sliding doors maximises your access to the interior of the wardrobe and avoids the need for clearance normally required for swinging doors, while the use of mirror panels promote light and the perception of increased space.

### Features:

- Full height finger grip and PVC buffer strip
- Raised runners incorporated into the sill profile
- Height adjustable rollers
- Sturdy aluminium components
- Smooth, whisper quiet operation
- Two, three and four door configurations possible
- 7 year 'peace of mind' guarantee\*

WARDROBE DOORS

» Your G. James 801 Series Wardrobe Door is constructed of low maintenance aluminium with each profile purposely designed to provide strength and substance to the product without compromising on style. In addition the sill profile incorporates raised runners (not grooves) which avoids the problem of the track becoming a dust collector. For further information relating to possible configurations refer to the G. James Residential Product Selector.

G. James is an Accredited Member of the Australian Window Association Product Accreditation Program and an environmentally aware organisation.†

† G. James wardrobe door extrusions are manufactured in Australia from billet produced using recycled aluminium. This billet requires 95% less power to produce than original billet.
